

Webfirm supports the following browsers when developing websites:

- Firefox (latest version)
- Safari 4 & 5
- Internet Explorer 7 & 8

These browsers are the most up to date and widely used browsers. They enable us to conform to Web Standards when developing sites, making a better website experience for you and your customers.

Internet Explorer 6 (IE 6)

Please note Webfirm no longer supports IE 6 for the development of new websites.

Due to the increasing functionality of today's websites the limitations of IE 6 significantly increases the development time. This is not beneficial to you, our valued client, as it increases the cost of website development. It also means we have to introduce hacks to your site which in turn stops us from conforming to Web Standards.

We are happy to help existing clients with upgrading their browser to a newer version free of charge. To do this please contact your Account Manager or call 1300 Webfirm (1300 932 347).

Alternatively you can upgrade your browser by going to one of the links below. All of these browsers are free of charge.

- Firefox { <http://www.mozilla.com/en-US/firefox> }
- Safari { <http://www.apple.com/safari/> }
- Internet Explorer { <http://www.microsoft.com/windows/internet-explorer> }

We will continue to support existing clients who use IE 6 for a period of 12 months from 15 June 2010, at a cost reflective of the additional development time required.
